Summary

DevOps, QA, and automation enthusiast with a sharp focus on building reliable systems and smooth developer experiences. I specialize in test automation and performance monitoring combining deep QA practices with a DevOps mindset.

Skills

- Languages: JavaScript, Python.
- Tech Stacks: MERN, LAMP.
- Testing: Selenium, Playwright, Cypress, JMeter.
- Tools: Git, Jenkins, Docker, Grafana, JMeter, NGINX.
- Cloud: AWS, Akamai.

Experience

Novo - 2025- Present (*Freelance*)

Automation Tester

Produced and executed automated end-to-end tests for a mobile app within the FinTech industry.

- Analyzed software requirements to create high-coverage test cases.
- Developed and maintained automated test cases for both iOS and Android.
- Conducted functional and non-functional testing, ensuring comprehensive coverage.
- Identified critical issues and generated defect reports for prompt resolution.
- Worked closely with cross-functional teams to ensure a holistic approach to quality.
- Maintained thorough records of test cases, results, and scripts.
- Conducted load and other non-functional tests.

Lebanese Alternative Learning - 2023 - Present (*Full-time*)

DevOps Engineer

- Tuning CDNs, caching policies, and TLS configurations to improve performance and reliability.
- Maintaining observability and uptime by proactively monitoring and handling incidents.
- Developing and maintaining automated test pipelines alongside DevOps processes.
- Managing high-availability systems and implementing scaling strategies for large traffic volumes.
- Focusing on cost optimization while ensuring secure and efficient infrastructure.
- Identifying release risks early by aligning infrastructure with test coverage and quality checks.

Tylleum - 2021 - 2023 (*contract*)

Automation Tester

Produced and executed automated end-to-end tests for a mobile app within the FinTech industry.

- Analyzed software requirements to create high-coverage test cases.
- Developed and maintained automated test cases for both iOS and Android.
- Conducted functional and non-functional testing, ensuring comprehensive coverage.
- Identified critical issues and generated defect reports for prompt resolution.
- Worked closely with cross-functional teams to ensure a holistic approach to quality.
- Maintained thorough records of test cases, results, and scripts.
- Conducted load and other non-functional tests.

One More Multiverse - 2020 - 2022 (*Full-time*)

Senior Manual QA Tester

Produced and executed effective strategies and test plans through the close coordination with engineers, while reporting and documenting technical issues. Collaborated closely with QA engineers to create and modify existing test plans as well as provided continuous UX feedback and modifications based on community reports.

- Designed, developed and executed comprehensive, well-structured test plans and test cases to ensure software quality.
- Recorded, documented and triaged software bugs thoroughly.
- Conducted functional, performance, regression and UAT tests on a regular basis.
- Liaised with QA analysts and contributed to the requirement docs and acceptance criteria.

- Coordinated with product owners for testing plans and feature releases.

Education

B.S - Entrepreneurial Management, Class of 2018

Lebanese American University - Beirut, Lebanon

Projects (link to [portfolio](#))

- [Crypto Wallet Generator](#): A JavaScript implementation of a cryptocurrency wallet generator.
- [End-to-End Testing Framework](#): A suite of automated tests for an E-Bank using Selenium and TestNG.
- [A Python Scraper](#): A script that scrapes the value of the LBP against the USD at the shadow market rate, then stores it in a DB. I created the project during the 2019 liquidity crisis that hit the Lebanese economy. The currency has now stabilized and the project is now archived.
- [A Cryptocurrency Dashboard](#): A slightly more aesthetic version of coinmarketcap.com

Additional Information

- EU National.
- Trilingual
